

A must for improving safety while driving!

AQUACONTROL®

The benefits of AQUACONTROL® are:

- Safer driving
- Improves driving comfort
- Clearer vision during bad weather
- Reduces glare at night
- Insects, snow, and ice are removed with ease
- Lasts up to 20.000 km for windshields and 60.000 km for side windows
- Less wear on windscreen wipers
- Easy and just takes minutes to apply

AQUACONTROL®, the coating that actually repels water and sleet from glass surfaces

A revolutionary development from the airplane industry made available for automotive use. In combination with wind generated by the speed of the automobile **AQUACONTROL®** removes water droplets with lesser use of the windscreen wiper system.

This unique treatment can be applied to the windshield and the side windows of your car. The result is a crystal clear vision during all weather conditions, particularly at night. Unlike other commercial water repellents which can wash away in a matter of hours, one treatment lasts up to 20.000 km on the windshield and 60.000 km on the side windows before regeneration is necessary. **AQUACONTROL®** is easy to apply and in case of regeneration the old layer doesn't have to be removed. Cleaning thoroughly is enough before re-applying **AQUACONTROL®**.

After cleaning the glass thoroughly finish the cleaning with the Aquacontrol Pre-treatment cloth

Rinse away the residue with clean water

Apply the Aquacontrol coating first vertical, then horizontal

Polish with paper towels until the glass surface is clear and bright
